Objectives

01

Objective title

Define your business, marketing, and communication objectives. For example, you might set goals around growing revenue, generating leads, or shifting perceptions around your brand.

02

Objective title

Each objective can be standalone or contribute to the next one in the list. This will depend on your strategic plan and internal company structure.

03

Objective title

Make sure your goals are specific, measurable, achievable, relevant, and time-bound (SMART). Explain what you want to achieve, for whom, during which time frame, and how you'll define success.

04

Objective title

For example, if you want to increase market share, aim for a specific percentage increase within the next year by launching a new product or capturing a new market segment.

Title

Write a bold, compelling statement about what the company wants to achieve.

Explain how a partnership would help make this goal a reality and why it's worth pursuing together. Think about how your potential partner can contribute.

The vision

Write a bold, compelling statement about what the company wants to achieve

Use this space to expand on what you wrote above. Explain how your strategic plan is relevant to your business.

Why Wonder?

Technology once inspired awe. Today, speed and automation risk flattening experiences into something invisible and interchangeable. *Wonder reconnects technology to imagination* and reminds us that behind every experience that feels like magic is someone who built it. This theme recenters the human role in building and restores a sense of possibility.

The challenge

Builders can ship faster than ever, but meaning, confidence, and taste are harder to hold onto. Optimization is winning, while humanity risks falling away. Experiences feel generic. Builders feel pressure to keep up without clarity on what excellence looks like or where they belong in what comes next.

The opportunity

Wonder positions Twilio as a cultural participant, not just a platform. It reframes building as imagination and craft, expands who identifies as a builder, and reinforces a simple truth: technology may feel like magic, but builders are the magic makers.

A unified theme is what turns an event into a story, not a schedule.

It gives us a single point of focus so every activation, space, and moment can synchronize and reinforce the same idea from different angles.

Alignment

Everyone builds toward the same destination

Reinforcement

Keynote messages show up again in the physical experience and demos

Progression

Ideas stack over time, creating a stronger final takeaway

Clarity

Each speaker owns a chapter, not the whole book so they can go deeper on their piece

Memorability

Repeated exposure through different moments makes it feel larger and be more memorable

Wonder story arc

Amazing experiences exist

You are an architect of wonder

Learn from best builders

Get the right tools

Own your own freedom

Build experiences that create wonder

Part 1

Part 2

Part 3

Part 4

Part 5

Part 6

The invisible extraordinary

We interact with technology every day that would have looked impossible not long ago, yet we barely notice it. Awe begins when we slow down and recognize what’s actually happening—and how effortlessly it arrives.

Wonder is designed

Wonder isn’t accidental — it’s crafted. Builders make intentional choices about what to simplify, what to amplify, the timing, the flow, the cadence so the experiences feel intuitive yet extraordinary.

The lineage of builders

The fastest path to making people feel awe is studying those who already know how to do it. We build better when we borrow patterns, absorb taste, and extend ideas rather than starting from scratch.

Foundations for bold ideas

Wonder at scale requires foundations: the right primitives, tools, and technical fluency. Great tooling doesn’t just speed you up—it expands what you can attempt and lets you focus on the experience instead of the plumbing.

Build without walls

The fastest way to kill wonder is friction — rigid platforms, locked templates, walled gardens, and artificial limits that force experiences into the same shape. Flexible, modular tools give you the freedom to tailor what you build to the moment, the audience, and the story you’re trying to tell.

Building for wonder

So the question is: what will you create when the world is open and the toolkit is in your hands? Design interactions that feel effortless on the surface and astonishing underneath—and you’ll give people that rare feeling that technology can still be magical.

Establishes the phenomenon (wonder) and then the cause (builders).

Broadens the frame to community and learnable patterns.

Moves from inspiration to concrete requirements: capability → freedom.

Lands with forward- looking mandate: build experiences that create wonder.

Timeline

Show a timeline with the current status of the strategic plan and upcoming deadlines

Build trust with confidence on the platform that powers 2.5T digital interactions

Our trusted foundation ensures every interaction is secure, reliable, and drives engagement while reducing risk

Reliability at global scale

Seamless user verification
and fraud detection

Enhanced data security
and governance

Branded, compliant
engagement with less
overhead

Built for builders

Strategic success model

Professional Services

Our team supports yours across planning, implementation, onboarding, guidance, and optimization—from helping to build your roadmap, to making the most of your solution.

Personalized Support

Get dedicated assistance and improved SLAs, with direct access to Twilio support engineers for complex deployments and planning as well as faster issue resolution.

Twilio Editions

Run enterprise communications at scale using Twilio's suite of access management controls, administration tools, and security features.

Tech Partners

Build with vetted technology partners that act as an extension of Twilio—and your team. Speed time-to-value with out of the box integrations with your existing tools and systems.

Pillars of Twilio data protection

Privacy and security by design

Twilio builds privacy and security into all products by design and by default, collecting minimal data that's shielded by layers of safeguards. We also use external auditors to verify the adequacy of our compliance measures to ensure that Twilio meets current requirements.

Global protection and privacy compliance

We rely on our Binding Corporate Rules to serve as our code of conduct that governs our global processing of personal data, ensuring that we are committed to data protection measures that go beyond what local laws require and no matter where customers are located.

Transparency and control

We provide privacy resources and controls to help customers make meaningful choices about how their data is used. We also encrypt data both in transit and at rest utilizing industry standard encryption algorithms.

We're investing in AI

that simplifies the complexity of personalized engagement at scale

AI-Powered Instrumentation with Copilots

Faster innovation and better developer experience with intelligent copilots that assist across deployment and maintenance

AI-Powered Identity Resolution

Understand every unique customer and deeply personalize their experience while, at the same time, detecting and proactively mitigating fraudulent activity

Advanced Predictions and Recommendations

AI-powered predictions for traits like customer lifetime value, churn risk, propensity to buy and more, with tailored product and audience recommendations

Intelligent automation of workflows

AI built into every layer that remove complexity, automates tasks, and helps protect our customers at scale

Communication complexities are driving up costs

Limited reach and inability to scale

Degraded quality and silent failures

Cost of maintenance hinders innovation

Rampant and sophisticated fraud

How we're doing

Strengths

- Make a list of what your organization or team excels at
- This is what sets you apart from the competition
- Add as many items as you need

Weaknesses

- Identify areas for improvement within your organization or team
- Think about what you could be doing internally to achieve better results
- Add as many items as you need

Opportunities

- Call out any opportunities for growth
- These are external factors, such as market trends or platforms, that your business can leverage
- Add as many items as you need

Threats

- Mention any challenges, obstacles, or risks that your business is facing
- These can range from environmental factors to new market competitors
- Add as many items as you need

Business roadmap

Step 01

What steps must we take to reach our strategic goals?

- Add more info about this step.
For example, deliverables, activities, marketing assets
- You can also call out the teams or stakeholders involved
- Mention any performance targets that should be reached during this step

Step 02

What steps must we take to reach our strategic goals?

- Add more info about this step.
For example, deliverables, activities, marketing assets
- You can also call out the teams or stakeholders involved
- Mention any performance targets that should be reached during this step

Step 03

What steps must we take to reach our strategic goals?

- Add more info about this step. For example, deliverables, activities, marketing assets
- You can also call out the teams or stakeholders involved
- Mention any performance targets that should be reached during this step

One Platform. Global Reach.

Trusted Engagement.

Channels your consumers require

Native channel support in a single platform with voice, email, video, push, and messaging across SMS, RCS, MMS, WhatsApp, and Facebook Messenger.

Intelligent delivery optimization

Built-in failover and fallback ensures messages can be delivered even when consumer adoption is limited or channel is unavailable.

Verified, branded senders globally

Twilio simplifies complex onboarding and deliver seamless, verified experiences across voice, messaging, and email. With a developer-first approach, Twilio eases cross-channel orchestration while reinforcing trust.

Efficient observability with insight

Simple-to-digest and filterable statistics that allow customers to clearly understand opportunities and challenges without the need to develop custom reporting.

Traffic Optimization Engine

Manage messaging traffic to improve delivery at scale. This includes shaping traffic, prioritizing use cases, and allocating throughput by tenant.

Security you can trust

Risk management and operational security protocols include continuous audits and key certifications:

- ISO/IEC 27001 & 27017 & 27018
- SOC 2 Type 2
- PCI DSS Level 1 & 4
- HIPAA eligibility

“It was pretty obvious we had to switch to something that would scale, and Twilio was by far the best option. We knew we wanted to build a platform that would allow for multiple hosts to each have their own campaigns. That would have been impossible without Twilio. We knew that we needed to pick a partner that had the reliability in terms of message delivery and also the underlying infrastructure to make us feel confident in what we were putting forth for our hosts and for our subscribers. We needed a partner that we felt that we could grow with and scale alongside.”

Improved, efficient interactions

Turning conversations into growth engines

Accelerate AI adoption

Easily deploy and scale AI with Twilio's open platform to drive value faster without limitations.

Modernize without the overhaul

Flexible and modular integration options to avoid upfront costs and full replacements.

Drive seamless omnichannel engagement

Orchestrate across channels with seamless transitions from digital to live-agent interactions.

Built-in trust and compliance

Comprehensive observability plus embedded security, privacy, and channel compliance to ensure regulatory compliance and transparency.

Future-proofed applications for every team

Over 10 million developers approve

Onboard painlessly

Twilio is built for today's builders with easy-to-use tools to optimize onboarding, management, and ongoing improvements.

Ensure compliance across channels

Comply seamlessly for ISVs and direct brands across geographies, channels, use cases, and sender types.

Observability for optimization

Turn data points into action and monitor performance with personalized recommendations and visual dashboards.

Expand into the future

Twilio is built to easily orchestrate and add communication channels for innovation-driving customer engagement.

Increasing difficulty in managing compliance across industries and regions

Onboard once and brand every channel

- Compliance onboarding is the entry point to trusted ecosystem
- Branded channels convey that trust
- Trust = greater engagement
 - 75% of consumers who received a branded text message said it increased their trust in the communication
 - 6-7% higher pickup with Twilio Branded Calling

Building trust in a digital world **is only getting harder**

More noise than ever

The average global consumer receives about 146 notifications per day. That's one *every 10 minutes*.

More AI intervention

95% of global businesses have deployed or plan to deploy conversational AI for customer service and sales. Balancing authenticity and efficiency is critical.

Data ownership is AI's blindspot

Unclear data ownership exposes businesses to legal, ethical, and reputational risks, as AI systems may misuse data without consent.

Sources: [Digital 2025 Global Overview Report](#), 2025 Survey of 380 global business decision makers, Clone Me: Data Ownership in the Age of AI", Forbes, October 4, 2023

Fully-managed authentication

Real-time signals + step-up verification for better access decisions

Identity intelligence + authentication

- Proven fraud protection
- Unrivalled conversion
- Accelerated time-to-market
- Stronger access decisions

Business Discovery Guide

Intelligent Multichannel Virtual Agents (IVA)

- Which channels (e.g., SMS, chat, voice, WhatsApp, email) are your customers using to reach your support team?
- How do you identify which interactions are suitable for automation via virtual agents versus requiring live human support?
- What percentage of incoming customer requests are currently handled by self-service or virtual agents?
- What is the current customer satisfaction (CSAT) or net promoter score (NPS) for interactions resolved by your existing virtual agents?
- Which business processes or use cases do you believe would benefit most from automation via virtual agents?
- How easily can your virtual agent solution update or adapt to new intents, FAQs, or products/services?
- Are your virtual agents able to leverage customer history or data to personalize responses across channels?
- What are your top metrics for assessing virtual agent performance (containment rate, time to resolve, escalation rate)?
- What challenges are your customers facing when interacting with your current virtual agent or IVR solutions?
- How are you ensuring a consistent experience across all digital channels your virtual agents operate on?
- What specific compliance, privacy, or language requirements must your virtual agents meet?
- Are you currently leveraging AI or LLMs for advanced language understanding, summarization, or intent recognition? If so, how?
- How do you hand off a customer from a virtual agent to a human agent—do you provide full context and history?
- In your ideal state, what new capabilities or experience would your virtual agents enable for your customers?
- How do you prioritize investment in enhancing virtual agent capabilities versus investing in other agent productivity areas?

Four fears holding CX teams back

“

We will have to rip and replace all of our existing systems.

”

“

This will be a huge upfront investment.

”

“

It will take too long to realize value.

”

“

AI is too complex to implement.

”

How Twilio empowers CX teams

Build on top of your existing infrastructure.

Pay only for what you need, as you go.

Realize value quickly by modernizing in stages vs. all at once.

Start small with human-in-the-loop workflows you can trust.

Business Discovery Introduction

Questions? Contact Kristin Schultz or Ryan Darbonne.

Intelligent Multichannel Virtual Agents (IVA)

- Which channels (e.g., SMS, chat, voice, WhatsApp, email) are your customers using to reach your support team?
- How do you identify which interactions are suitable for automation via virtual agents versus requiring live human support?
- What percentage of incoming customer requests are currently handled by self-service or virtual agents?

[See more](#)

Observability & Insights

- What systems or dashboards do you currently use to monitor your customer service operations in real time?
- How do you measure and track agent productivity and effectiveness across channels?
- Which KPIs do you use to evaluate your support operations (AHT, FCR, CSAT, SLA compliance, etc.)?

[See more](#)

Intelligent Routing to Human Agents

- What current criteria do you use to determine which human agent should take over a customer conversation?
- Which channels do you route inquiries from—are they managed separately or via a single platform?
- What is your current process for capturing incoming requests and assigning them to an agent/team?

[See more](#)

Personalized Agent with Contextual Data

- What types of customer data (history, preferences, previous cases, journey stage) do your agents currently have access to?
- How is context presented to agents across various channels (voice, chat, messaging, etc.)?
- What systems do agents currently use during an interaction (CRM, ticketing, knowledge base, CDP, etc.)?

How important is **verification** and **access assurance**?

Avoid wasting
marketing dollars on
personalization
for unauthorized
agents or fraudsters

Confidence that only
authorized users can
access sensitive
systems

Ensure automated
workflows and agents
can only perform
approved actions

ConversationRelay

Bring-your-own-AI voice agents

GA

Integrates with any LLM

Orchestrates STT/TTS, interruptions and DTMF

Low latency voice AI interactions (<500ms)

Compliance for sensitive industries

Email Logs

Enhanced visibility into email delivery

Description:

Email Logs is Twilio’s tool for troubleshooting email delivery. Designed for speed and ease of use, it provides event-level visibility into the full lifecycle of an email. Teams can quickly verify send status, inspect delivery details, and trace issues through console or the publicly available API.

Value:

Email Logs delivers fast, transparent access to detailed event data, enabling teams to pinpoint issues and validate delivery outcomes with confidence. Available to all customers at any scale, both the API and console offer a powerful, built-in logging experience as part of the standard email offering.

Fraud threats touch every stage of the customer journey

Inefficient routing

Higher latency & failed
SMS deliverability

No adaptive
authentication triggers

Disposable to temporary
numbers used for fraud

Fraudsters are getting smarter and **defending against them** **is getting pricier**

SMS pumping fraud

Track reassigned numbers

High-risk geographies
& carriers

Toll fraud exposure

Leverage AI to analyze
traffic patterns

Vulnerability to SIM
swap attacks

Virtual & VoIP numbers
used for fraud

Authentication conversion advantages of Twilio Verify over traditional messaging APIs

Superior global Performance

Twilio Verify outperforms the median conversion of the best-in-class companies

Real savings for Verify customers

Thanks to higher conversion rates, Twilio Verify users pay a maximum of 88 messages for every 100 authentication attempts made on a typical messaging platform

Authentication Conversion Rate			
Metric	Twilio Verify	Messaging API	Difference
Median all countries	84.9%	72.3%	12.2%
Median high-risk SMS pumping fraud countries	86.6%	76.3%	10.3%
Median high-risk SMS pumping fraud countries	82.2%	69.4%	12.9%

Challenge

As part of international expansion customers needed to be verified to access products and services, creating a need for short codes for each country which was taking 2 - 9 months due to regulatory and compliance hurdles.

Solution

Twilio Verify and SMS as a channel for one-time passcodes (OTP) across the globe checked all the boxes — from supported capabilities and speed to market, to built-in redundancy, compliance and scale
